Prerequisites
• Ensure that the auto sleep and auto lock features are disabled on your Windows system.
• Connect the computer to a continuous power source to prevent interruptions.
• Ensure you login as admin user

Media File Setup
Place your desired .mp4 video file into the program's (windows-auto-video-play-main) directory. This program contains a sample file. After you add your media file **delete the sample file**.
In case multiple mp4 files are present, the program will select and play only one of them.

Time Configuration
Set your computer's time to desired timezone

If you need guide time zone change:
https://www.pcworld.com/article/1513815/how-to-make-your-laptop-change-time-zones-automatically-in-windows-11.html
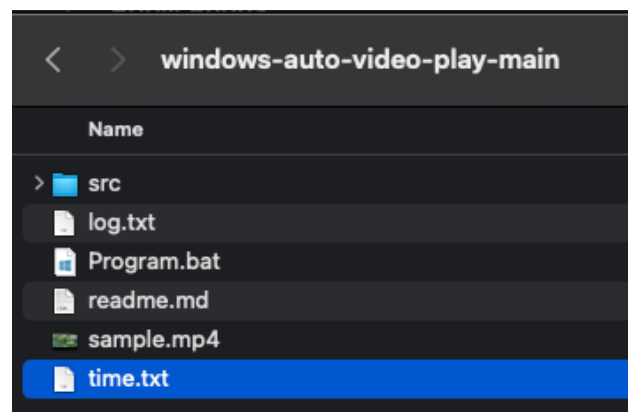

Set start and stop time
The program will determine the video's start and end times based on your desired input to **time.txt (time)** file.

example of the time.txt file

10:00
17:00

10:00 is start time and 17:00 is stop time

Open the "time.txt" file.
Specify the start time and stop time in 24 hour format for the video playback.

Running the Program
Locate and double-click on the **"Program.bat" (Program)** file in the downloaded folder to initiate the process.

If you encounter a popup notification from Windows Defender or any antivirus software, please allow the program to run.

Logs
Any activity or errors encountered by the program will be logged. You can review these logs in the **"logs.txt"** file.
